

ACRYLIC MIRROR SHEET - CLEANING INSTRUCTIONS

Cleaning

Surfaces of items made from acrylic mirror should not generally require cleaning until after fabrication and before packaging. If however any surface decoration process is planned such as screen printing it is advisable to wash the sheet surfaces to be decorated with clean, fresh water using a chamois leather or soft cloth. This has the advantage of removing all traces of static charge from the sheet after removal of the film which might otherwise attract dust. For all general purpose cleaning operations, acrylic mirror should be washed simply with clean cold water to which a little detergent has been added. The use of any solvents such as methylated spirits, turpentine, white spirit or proprietary window cleaning products is neither necessary nor recommended - and may cause irreversible surface damage.
